

Premier Bank is a technologically advanced super charged community bank that provides services which exceed customer expectations every day. They have avoided all proximity barriers with the right application of technology, wise capital investments and a keen futuristic approach. Premier Bank services a nationwide customer base with ease from it's Lenexa, KS headquarters. Great people, great ideas and an overall great approach is Premier Bank!

Remote Deposit – not just making your bank deposit anymore!

While many other banks are still considering if they should be offering Remote Deposit Capture (RDC), Premier Bank is in their 3rd generation. As a fully image enabled organization, this service is offered in a streamlined fashion and is an integral part of the bank's overall service offering. Premier Bank has taken remote deposit from a desk top depository solution to an integrated accounts receivable tool.

Starting as a simple deposit offering, Premier Bank's feature-rich remote deposit solution, e-Deposit, has grown to provide their customers with in-house, sophisticated lockbox capabilities in a thin client environment. The customer basically scans the items, substitute check images are created, a deposit slip is automatically generated and reconciliation is completely automated. An electronic file is sent via the bank's secure internet connection for clearing and availability assignment.

Customers are given the ability to capture remittance information and upload that information into their systems for posting. This information can be captured from a simplistic stub using MICR, OCR or pure image lifting technologies. Premier Bank uses ICR, CAR, LAR as well as some of the most advanced image lift technologies to insure image quality as well as data lift integrity off of both the check and any associated document. If the customer does not have a simple capture document, they can preload information for association with the captured check or the operator may key information with the checks as they are captured. Information associated with check detail is maintained for future retrieval so capture

is necessary only one time. Depository reports are customizable for internal reporting and tracking. In addition, a seven year image archive is provided to reduce or eliminate any paper storage requirements a customer might have. The system allows for checks to be converted to ACH transactions and provides for automated returned item handling.

All of the features speed posting, enhance internal control and fraud protection, and keep accounts receivable more accurate all while getting deposits to the bank and in your account faster, right from your desktop. Unique customer requirements or posting needs are met with ease. A customer base that spans from coast to coast and overall customer longevity is a testament to Premier Bank's ability to provide the right technologically advanced solutions.

Having always owned and managed its own technological resources Premier Bank remains close to the ongoing demands of its customer base and continually responds with the right technology. As the first bank to fully convert to Check 21 with the Federal Reserve, Premier Bank in Lenexa, Kansas, has surpassed most when it comes to technology.
